THE MULTI-CLIENT SURVEY AS AN INSTRUMENT OF MARKET RESEARCH

What is a multi-client survey?

A multi-client survey is a **representative survey** of a **predefined target group**.

Several clients with a variety of questions can participate in a multi-client survey.

The **results** are **exclusively transmitted to the respective client**.

What are the advantages of multi-client surveys?

The high organizational **baseline costs** of representative surveys (formation of samples, implementation of the interviews – face-to-face, inhome – employment and supervision of interviewers) **are substantially reduced** by splitting up the costs between several clients.

Clients only pay for their questions and can participate with as little as one question.

The target groups of our multi-client surveys

iconkids & youth offers **tailor-made multi-client surveys among young target groups**:

- ▶ Children at the age of 6 to 12 plus / or their parents
- ▶ Teenagers at the age of 13 to 19 plus / or their parents
- ▶ Parents of children aged 0 to 5 years

Why face-to-face and not online?

Only face-to-face interviews provide representative data for **all** sections of the population. This is because the sampling process not only takes into account the age, gender and regional distribution of respondents, but also their level of education, social class and migration background. In this respect, online access panels reach their limits, as they do not reach all sections of the population sufficiently well and therefore cannot represent them in the surveys (online bias).

THE ADVANTAGES OF THE MULTI-CLIENT SURVEYS AT ICONKIDS & YOUTH

Personal survey situation – face-to-face , in home	The target group is interviewed in their familiar home environment ▶ <i>No artificial studio atmosphere, no street survey, no online bias!</i>
Advice from the iconkids&youth experts	Our experienced researchers who are specialized in children and teenagers give advice on the design of questionnaires and ensure that the wording of the questions is suitable for the target groups
Specifically aimed at young target groups	Exclusive interviews of children and teenagers guarantee results that are representative for the respective population. ▶ <i>No misinterpretations due to results obtained from subgroups of adult surveys!</i>
Group differences can be analysed	Because of the big sample size it is possible to distinguish between subgroups significantly , e.g. gender and age.
Addressing sub-samples	In every target group, sub-samples can be selected , e.g. specific age groups or boys/girls only.
Testing of concepts, packaging and products	The personal face-to-face interview situation allows us to conduct concept and product testing for up to 7 monads or splits, e.g.: looking, touching, trying out, comparing, tasting, etc.

Method	<ul style="list-style-type: none">▶ Personal face-to-face in the household of the family (CAPI)▶ Well structured questionnaire▶ Young interviewers – no disturbing factor due to age difference – to a large extent
Sample 	<ul style="list-style-type: none">▶ Representative area samples – nationwide – according to sample points▶ Selections of respondents:<ul style="list-style-type: none">- iconBABY+ bus: according to age, sex and migratory background of the respondent as well as education of the head of the household, family status of the mother as quota characteristics- iconKIDS bus: according to age, sex and migratory background of the respondent as well as education of the head of the household, family status of the mother as quota characteristics- iconYOUTH bus: according to age, sex, education and migratory background of the respondent as quota characteristics
